Mergers & Acquisitions

Seamlessly integrate and migrate newly acquired enterprise content with existing systems and processes.

Mergers and acquisitions without boundaries

Mergers and acquisitions (M&A) often provide multiple business benefits for the companies involved, including access to new markets and a wider customer base, reduction of cost via economies of scale, and obtaining quality employees.

However, M&A scenarios are complex and not without their own set of problems. One of the biggest challenges is to quickly deliver on a transaction's strategic business objectives while making sure that both companies' day-to-day operations continue uninterrupted.

## Mitigate disruption to users and operations

Beyond just integrating technology, organizations must think about how to integrate different cultures and consider how people collaborate, while merging the business processes of both organizations into one. It's critical to do this with the least amount of disruption to users and operations.

With SkySync, your new and existing content management systems and line-of-business applications can live side-by-side, so you can integrate your enterprise content into any platform you desire while focusing on crucial change management for your organization–for as long as needed.

Automate content migration while integrating end-users

Successful mergers and acquisitions require thoughtful and well-orchestrated approaches to change management. Integrating acquired business units means allowing end-users to adjust to new systems, new culture, new applications and new coworkers. One of the crucial parts of a successful integration is giving end-users necessary time to adjust. Change management in this scenario can be unpredictable and the timeline can be erratic, making it crucial to focus on the things you can control.

With SkySync, you can analyze your existing content, identifying which content needs to be synchronized and which content can be archived. SkySync will then integrate your systems and synchronize content between your organizations, making it possible for you to focus on the training, change management and user adoption of your new platform.

SkySync accelerates M&A initiatives

- Scales to petabytes of content and millions of files.
- Analyze and inventory your data continuously.
- Sync ECMs and LoB applications across business units.
- Govern and control data across all new and existing systems.
- Users adopt at their own pace.
- IT-controlled job monitoring and flagged file repair.

SkySync enables the world's most successful enterprises with total control over and unbounded access to their content, empowering their evolving modern workforce. We connect disparate storage platforms, unite silos of information, and synchronize content spread across the enterprise—at scale. We enable our customers to achieve singular access and unified control over their content, so they can support the evolving needs of a modern workforce.
