

Synchronize on-premises content to the cloud

Enable productivity and collaboration without compromising governance policies, security measures or existing system integrations.

Enterprise content management is not "one-size-fits-all"

For a majority of organizations, migrating to a single platform for content management and collaboration is not possible. Many have brought in newer, cloud-based technologies but remain reliant on their on-premises systems for a variety of reasons -- including regulatory compliance, data governance, existing line-of-business-application integrations or legacy investments.

Unsurprisingly, these content silos create information chaos for many IT departments – but it doesn't have to be this way. Digital transformation with both new and legacy ECM platforms can be a reality for your business.

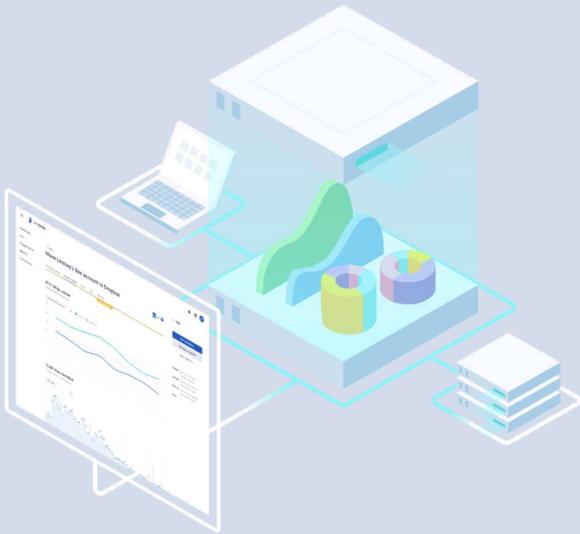

Meet hybrid content synchronization

SkySync's bi-directional synchronization engine enables your organization to integrate and synchronize existing on-premises platforms with any cloud service – creating a hybrid environment with the best of both local and cloud-based document management systems.

This enables your business to enhance legacy investments by extending compliance, security, and control to all content repositories while empowering your users to readily access and collaborate on content from anywhere on any device.

Modernize your workplace and enable your workforce

Information workers spend nearly 30% of their day creating, finding, or reading documents. You can reduce the time and money wasted wading through disparate systems by eliminating silos and making enterprise content more accessible – increasing productivity without overhauling your existing IT infrastructure.

Maintain a secure, on-premises platform as your source of truth while enabling a modern and mobile workforce. Workers can keep the information they need at their fingertips, without lugging their laptops around, waiting on VPN connections, or relying on emailing the latest documents to themselves to stay current on the road. File sharing and collaboration across remote and on-site workers is now seamless and secure.

Control information chaos

More than 59% of enterprises must maintain some of their data on-premises to maintain regulatory compliance. If you're in a highly regulated industry, you can ensure your information is secure and compliant while enabling users to securely collaborate with external parties and across multiple devices.

Increasingly strict privacy laws, including Europe's GDPR and the forthcoming California Consumer Privacy Act (CCPA) are placing more responsibility on businesses to maintain control and oversight over user data. Integration and synchronization of disparate platforms make it much easier to inventory and manage data, maintain compliance, and avoid serious fines.

Sync your content and enable your enterprise

- No impact to end users, existing systems, or business operations
- Selectively sync files and folders based on rules, events, metadata and filters
- Global file interrogation, analysis, and sync simulation capabilities
- Preserves existing file governance and retention policies
- Automatic transformation and management of forbidden target system file names, characters and types
- Bi-directional synchronization or one-way continuous copy
- Completely transparent to end users
- Extensive reporting and audit trail of all file transfers

SkySync enables the world's most successful enterprises with total control over and unbounded access to their content, empowering their evolving modern workforce. We connect disparate storage platforms, unite silos of information, and synchronize content spread across the enterprise—at scale. We enable our customers to achieve singular access and unified control over their content, so they can support the evolving needs of a modern workforce.
