

# Office 365

Enterprise content migration or synchronization to Office 365, SharePoint Online & OneDrive for Business

## SkySync for Office 365 migration

SkySync is designed to orchestrate both simple and complex migration initiatives from network file systems or major cloud storage services to Office 365.

Analyze, migrate, copy, and synchronize content across all existing systems—no matter where it resides.

## Fully automated user mapping

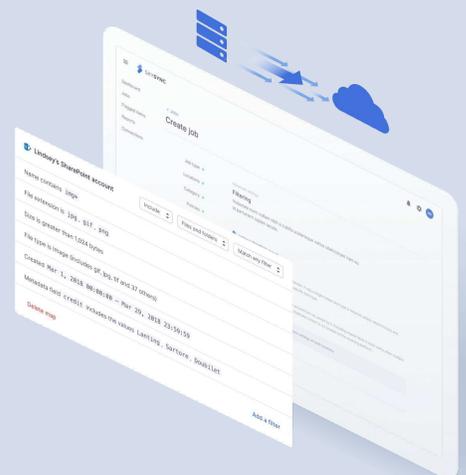

SkySync eliminates administrator overhead by fully automating user home-drive, account, and permissions mapping to Office 365 and SharePoint Online.

Other migration systems often force system administrators to manually export, reconcile, map, then re-import these relationships to Office 365.

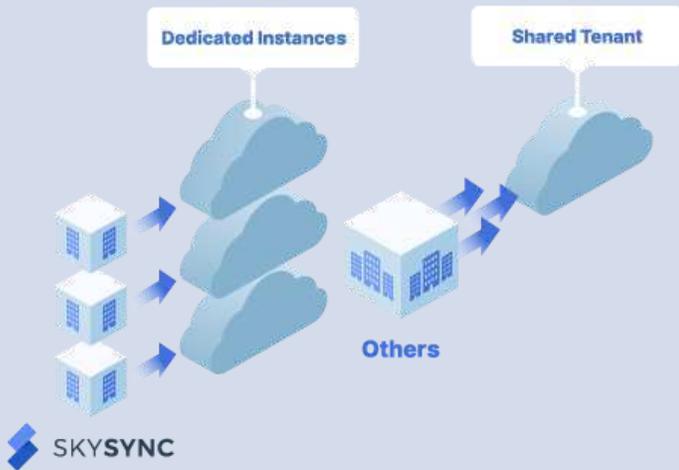

## No impact to users or operations

With SkySync's [advanced continuous-copy mode](#), the “lift and shift” migration is no longer required—your organization can move to Office 365, SharePoint Online or OneDrive for Business at your own pace.

And, since SkySync's continuous-copy operations are completely transparent, there's zero impact to users or existing business operations.

Supports migrations from any cloud service or network file system. Moving from a different platform? [View our enterprise connectors](#)

## The highest performance and security

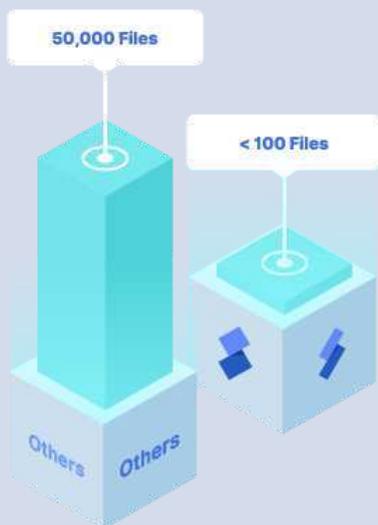

Each can be hosted on-premises or within Microsoft Azure, providing unlimited scalability and enterprise-grade security.

For on-premises deployments, files are streamed direct to the cloud service—not through a proprietary presence point or any other secondary cloud software.

## Advanced content discovery and analysis

SkySync's [advanced analysis capabilities](#) provide deep insight into existing content and file sharing behaviors, as well as simulate the entire Office 365 migration.

Now, you can precisely predict the outcomes of your Office 365, SharePoint Online or OneDrive migration before you move a single file.

Per 1mm files that require manual intervention

## Leading file transfer error resolution rates

Industry benchmarks for file transfer error resolution rates are 95%—**SkySync's rates often exceed 99%**. Translation: **SkySync delivers up to a 500x reduction** in the number of files that require manual intervention.

For the negligible level of remaining files that do require manual remediation, SkySync automatically organizes, groups, and presents these files for the administrator or file owners to resolve.

SkySync enables the world's most successful enterprises with total control over and unbounded access to their content, empowering their evolving modern workforce. We connect disparate storage platforms, unite silos of information, and synchronize content spread across the enterprise—at scale. We enable our customers to achieve singular access and unified control over their content, so they can support the evolving needs of a modern workforce.
